

MUL-0005

**AMENDMENTS TO THE CLAIMS**

1. (currently amended) A retrofit LED light tube for replacing a fluorescent light tube in a troffer fixture, the LED retrofit light tube comprising:
  - an elongated cylindrical transparent envelope;
  - a base cap at each end of the envelope, wherein the base cap comprises a first prong and a second prong extending from the base cap, wherein the first and second prongs are adapted to electrically communicate with a fluorescent light socket; and
  - at least one LED device in electrical communication with the base cap, wherein a positive terminal of the LED device is in electrical communication with the first prong and a negative terminal is in electrical communication with the second prong, wherein the at least one LED device consists of organic light emitting diodes.
2. (canceled)
3. (original) The retrofit LED light tube of Claim 1, wherein the at least one LED device are connected in parallel to additional LED devices.
4. (original) The retrofit LED light tube of Claim 1, further comprising a means for protection against a voltage surge.

MUI-0005

5. (original) The retrofit LED light tube of Claim 4, wherein the means for protection against a voltage surge comprises a varistor positioned in parallel with the at least one LED device.
6. (original) The retrofit LED light tube of Claim 1, wherein the LED device comprises a circuit board and a plurality of LEDs serially connected to the circuit board.
7. (original) The retrofit LED light tube of Claim 1, wherein the envelope comprises a first half and a second half, wherein the halves are complementary and adapted to form the envelope.
8. (original) The retrofit LED light tube of Claim 1, wherein the at least one LED device is connected in series to a half wave rectifier.

MUI-0005

9. (new) A retrofit LED light tube for replacing a fluorescent light tube in a troffer fixture, the LED retrofit light tube comprising:

an elongated cylindrical transparent envelope, wherein the envelope comprises a first half and a second half, wherein the halves are complementary and adapted to form the envelope;

a base cap at each end of the envelope, wherein the base cap comprises a first prong and a second prong extending from the base cap, wherein the first and second prongs are adapted to electrically communicate with a fluorescent light socket; and

at least one LED device in electrical communication with the base cap, wherein a positive terminal of the LED device is in electrical communication with the first prong and a negative terminal is in electrical communication with the second prong.

10. (new) The retrofit LED light tube of Claim 9, wherein the LED device comprises an organic light emitting diode.

11. (new) The retrofit LED light tube of Claim 9, wherein the at least one LED device are connected in parallel to additional LED devices.

12. (new) The retrofit LED light tube of Claim 9, further comprising a means for protection against a voltage surge.

MUN.-0005

13. (new) The retrofit LED light tube of Claim 12, wherein the means for protection against a voltage surge comprises a varistor positioned in parallel with the at least one LED device.
14. (new) The retrofit LED light tube of Claim 9, wherein the LED device comprises a circuit board and a plurality of LEDs serially connected to the circuit board.
15. (new) The retrofit LED light tube of Claim 9, wherein the at least one LED device is connected in series to a half wave rectifier.
